ARE YOU TIRED OF HIGH FUEL COSTS?

The cost of gasoline and diesel fuels have increased phenomenally in the last two to three years, and the surge will probably continue for some time! Indications are that the price of regular gasoline will reach $4.00 per gallon later this year. Diesel fuel, a lesser grade of fuel, is much higher than gasoline, can you figure that? The trucking industries as well as many other companies which receive products by trucking transportation can pass on increased fuel costs to U.S. consumers to some extent. However, we are all affected by the ripple effect of high fuel costs! There is absolutely no justification for oil companies gouging U.S. motorists over and over again while lining their pickets with billions upon billions of dollars in profits! To insure that all our Congressional Representatives and Senators get the message that we are sick and tired of ever-increasing fuel prices and that we expect them to do something about it soon, let's unite and "tell them" so. Please sign below so that your voice will be heard. Sign only once Thanks. Please print and send to: P.O. Box 362, Warm Springs, GA 31830
